

DIABETES PREDICTION USING MACHINE LEARNING

Submitted By:

Aditya Raj

Objective:

The objective of this project is to predict whether a person has diabetes or not using machine learning techniques.

Introduction:

Diabetes is a common disease that affects many people worldwide. In this project, machine learning is used to predict diabetes based on medical data.

Dataset:

The dataset used is the Pima Indians Diabetes Dataset.

Features Used:

- Pregnancies
- Glucose
- Blood Pressure
- Skin Thickness
- Insulin
- BMI
- Diabetes Pedigree Function
- Age

Technology Used:

- Python
- Pandas

- NumPy
- Scikit-learn

Algorithm Used:

Logistic Regression

Project Workflow:

1. Load the dataset
2. Split the dataset into training and testing data
3. Train the machine learning model
4. Test the model
5. Predict the result

Model Accuracy:

74.67%

Conclusion:

This project successfully predicts whether a person is diabetic or not using machine learning.

Thank You
